DETAILED ACTION

Previous rejections not discussed below have been withdrawn in light of applicants' submissions on 7/25/07 and 7/30/07.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1, 2, 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Buerger et al (USPN 7081532; 7/25/06). Buerger teaches a compound of formula I where R1 is pyridyl, R2, R3, R4, R5, and R8 can be hydrogen and R6 is a radical II – N(R9)-C(X)-(Y)_n-R10 and R7 is hydrogen or R6 is hydrogen and R7 is a radical of formula II. In the radical of formula II R9 can be hydrogen, X is oxygen, n can be zero and R10 is substituted phenyl. See abstract, columns 1-2. The reference discloses a number of substituted phenyls such as the instant piperidinyl-alkyl. For example, Buerger teaches the compound N-[4-methyl-3-(4-pyridin-3-yl)-pyrimidin-2-ylamino-phenyl]-4-piperidin-1-ylmethylbenzamide. See compound 7 in Examples 2-8 cited in column 22. Buerger teaches that the compound can be prepared in preparations to be delivered orally or by injection. See compound 20 lines 13-51. This compound appears to be an isomer of the instant compound claimed. It would have been obvious at the time the invention to make all isomeric structures including the ones of the instant claims. One would have been motivated to do this because isomeric forms of a

compound would have been expected to yield similar activity when employed in an identical application.

Claim Objection

Claims 3,4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art does not teach or suggest the instant compound of formula I having a piperazine substituent.
